Science Island Express

The Science Island Express delivers the most recent big things happening at HFIPS.

HFIPS researchers have been making progress in tumor molecular markers by developing a genomic classifier for predicting sensitivity of chemotherapy in breast cancer, which was further evaluated by the team with four other independent test sets.

ENVIRONMENT

Both red mud and corn stalks are waste, one in industry and the other in agriculture. But HFIPS researchers put the two together to fabricate a new functional biochar composites to remove dyes and neutralize acidity of wastewater.

MATERIAL

HFIPS researchers proposed an approach for easy and fast green synthesis of AgNPs@rGO that could be made into band-aids for wound sterilization and healing.
