

**MATERIAL**

A joint study published in *Nature* repurposes a ThDP-dependent lyase as a stereoselective radical acyl transferase (RAT) through protein engineering and combination with organophotoredox catalysis.

**HEALTH**

Tumor microenvironment-activated nanostructure was designed to enhance MRI capability and nanozyme activity for highly tumor-specific multimodal theranostics.

**COOPERATION**

The 10th International Advisory Committee Meeting of the Experimental Advanced Superconducting Tokamak, EAST was held on Science Island this month, showcasing a twenty-year fruitful collaboration of EAST and human's joint work for sustainable energy.
