

HFIPS honored two State Sci-Tech Awards

HFIPS was happy to announce the winning of two 2020 State Sci-Tech Awards:

1. Second Prize of State Technological Invention Award

A cross-disciplinary team, over ten-year effort

HFIPS cross-disciplinary team had been working together for over ten years to build up a full chain technology in fast on-site drug detection from fabricating a series of enhanced Surface-enhanced Raman Spectroscopy (SERS) substrates, proposing a new method to separate drug from body fluid, building database to the detection equipment development. Now, the technology has been applied extensively by police system.

Well done!

2. International Science and Technology Cooperation Award

“

It underlines the core value in my professional career for over thirty years, namely the sharing of scientific and technical knowledge as a universal good of humanity, and a vector of peace and understanding between peoples.

”

A key player, a true friend

Dr. Alain Becoulet, former Director of IRFM, now Head of ITER Engineering Domain, was honored the award for his over-thirty-year contribution to China's fusion development and his excellent effort to facilitate fusion collaboration between China and France.

Congratulations and a big THANK YOU !

Meet the other three HFIPS collaborators receiving State International Sci-Tech Cooperation Award:

Kenneth Gentle, 2004

Vincent Chan, 2009

Evgeny Velikhov, 2015
